# 2024 BUSINESS PLAN
## EXECUTIVE SUMMARY

### DESCRIPTION OF PROJECT

***"When we live in a safe, secure and affordable home, it supports our health, wellbeing and provides us with the solid base we need to thrive in life. That's why it's essential for everyone to be able to access and afford a decent home."*** - Shelter, UK Housing Charity

Home@ix is a property development group set up in 2019 by chartered surveyor and experienced property developer and entrepreneur, Roger Lewis. With 40 years experience of site finding, planning & construction through to professional services & management, sales & marketing, Roger set about putting together a team of individuals and independent contractors to bring his vision to life. That vision has been burnished through the Covid shut down and the recent economic roller coaster and in 2024 has been honed into a coherent plan for the future.

This is that plan.

Via a ring-fenced not-for-profit division of its commercial arm, Home@ix plans to build 1,750 new affordable family homes over 5 years for rent at 75% of open market rent in small, occupier-led communities in regions across the UK for families who can't afford to rent homes in the private sector. Community led consultations via our social capital partners will evaluate and measure our social impact from site finding to post-moving in support.

Our homes are pre-designed to a model using a fully ESG compliant, carbon-neutral, DfMA closed panel off-site building manufacture system. Every home will have renewable energy supplies, grey water harvesting, outdoor space for growing their own vegetables and shared outdoor community space. All components in the construction supply chain will be tracked through a data platform that creates digital material passports providing verifiable data on whole life carbon and a range of circularity metrics. Outline drawings and further information about the prototype can be seen in the drawings section of the data room.

With deep commitments to its homemakers around security of tenure, quality of homes and ongoing support relationships, Home@ix is aiming to transform the affordable rental homes experience for homemakers.

Home@ix has selected 8 UN SDG's it is weaving into every aspect of its business ending poverty to affordable clean energy, decent work and economic growth through to sustainable cities and communities plus others.

The plan is for Home@ix the business via the affordable letting portfolio to feed back into the philanthropy objectives of SDG Fund with a hardship fund for homemakers and an educational bursary to help homemakers' children with university costs, amongst other homemaker benefits as set out in more detail in this business plan.

Whilst 1,750 homes over 5 years will contribute only a fraction of the affordable rental homes needed, the brands aspect of the digital twin delivery is highly scaleable. The tech and supply chain approach and key partnerships with Mihub, Madaster, Smartxdata, Unisot et al will provide clear evidence for other providers that by harnessing technology, affordable rental housing can be provided at scale in a sustainable, efficient and cost effective way to provide security and autonomy in occupier led communities.

## Confirmation of Funds requested

$500 million US

## SDG's addressed

**"SDG No 4: Quality education** – sponsoring education and training opportunities for under-represented people in the construction industry, plus providing bursaries for further education for homemakers and their children

**SDG No 5: Gender equality** – a targeted programme for jobs, training and pay aimed at women in the construction industry and throughout the supply chain, including a programme for Home@ix own workers at all levels of the company

**SDG No 7: Affordable & clean energy** – through passive house construction reducing energy needs coupled with data driven solar heating and hot water system and the company's own energy use

**SDG No 8: Decent work & economic growth** – Home@ix has and will continue to invest in new technology and innovation to provide high quality and well paid jobs, encouraging creativity and entrepreneurship in its own workforce and throughout its supply chain

**SDG No 9: Industry Innovation & infrastructure** - the Home@ix dashboard, home design, digital home passports and data capture will be part of a groundbreaking platform designed to transform the housing industry by integrating advanced technologies for sustainable building practices and accurate carbon accounting

**SDG No 10:** Reduced inequalities - promoting the social and economic inclusion of all, irrespective of age, sex, disability, race, ethnicity, origin, religion or economic or other status

**SDG No 11:** Sustainable cities & communities - access to adequate, safe and affordable housing, participatory, integrated and sustainable human settlement planning; safe, inclusive and accessible, green spaces, in particular for women and children, older people and people with disabilities

**SDG No 12:** Responsible consumption and production - have measurable targets for sustainable management and efficient use of natural resources including waste generation and the promotion of lifestyles in harmony with nature

# WHAT

*"Access to housing is a precondition for access to employment, education, health, and social services. In order to address the current housing challenges, all levels of government should put housing at the centre of urban policies by placing people and human rights at the forefront of urban sustainable development."*
UN Habitat.org

# What is the problem being addressed?

Short answer: Affordable housing

This problem has already been identified and codified into UN SDG No 11:
**UN SDG No 11: Sustainable cities & communities -** access to adequate, safe and affordable housing, participatory, integrated and sustainable human settlement planning; safe, inclusive and accessible, green spaces, in particular for women and children, older people and people with disabilities

In the UK there are several serious problems with current rental homes:

1. Supply (not enough affordable homes available for various reasons)
2. Safety (unsafe buildings)
3. Security (homemakers have short tenancies and can be evicted on 2 months notice for no reason)

Dealing with each of these in turn:

# Supply issues

According to UK Government statistics "As of March 2022, there were 1.21 million households on local authority waiting lists for affordable housing for rent. As this number does not include other types of affordable housing, the overall number of households in need of affordable homes is likely to be much higher."

According to research carried out by Herriot Watt University for the National Housing Federation (NHF) and the housing charity, Crisis, 145,000 new affordable homes are needed each year in England to meet demand.

So demand for affordable homes is high.

Affordable rental properties in the UK are in short supply. There are around 4.1 million social and affordable rental properties in England, around 16% of the total housing stock (down from 20% in 2020) Around 59,400 affordable homes were delivered in 2021/22 of which around 26,700 were homes for affordable rent. (Source: Parliamentary paper July 2024)

Acccording to the **Knight Frank 2024 Affordable Housing report ,** official figures from the GLA (Greater London Authority) confirmed affordable housing starts fell a 'staggering' 90% in the 12 months to end of March 2024 and across the rest of the UK, grant funded starts fell by 60% year on year in the first half of the financial year 23/24.

So supply is low. The supply side issues include the following:

HOME@IX

## Housing Associations

According to the Knight Frank 2024 report referred to above, the main reason for the collapse in affordable rental supply is Housing Associations (non profit registered social housing providers) which have traditionally provided affordable housing in the UK, have reached their borrowing limits and due to their non-profit status they can't raise more capital.

Inflation, increased costs of construction and borrowings have all contributed to this situation but one of the main issues for Housing Associations is the cost of remediating existing housing stock following the 2017 Grenfell Fire in which more than 70 people tragically lost their lives. The Local Government Association estimates the fire remediation costs to be around £7.7 billion (source House of Lords December 2023 report) and the National Housing Federation estimate for the same work is around £10 billion. (source: Parliamentary Housing, Communities and Local Government Committee Report) Unlike private landlords, Housing Associations are entitled to little Government assistance with fire remediation.

The problems faced by existing social housing providers are summed up by the UK National Housing Federation: "Rental income is 15% lower in real terms than in 2015, and spending on maintaining and improving homes has hit record highs, with investment increasing by 20% in both 2022 and 2023. Additionally, we need to invest an average of £40-50k per home by 2050 to ensure they are safe, high quality, decarbonised, and meet new regulatory requirements."

## Planning

Anecdotally house builders and residents complain about the length of time it takes to build new homes from site acquisition, through planning to build out. Lichfields the pre-eminent planning and development consultancy in the UK (whose CEO James Fennell has a 20+ year working relationship with Roger Lewis, they are Home@ix appointed planning consultants) have confirmed this with the third of their "Start to Finish – how quickly do large scale housing sites deliver?" The short answer in 2024 is it takes about 6.5 years from the start of the planning application process to finishing the first home.

Successive UK Governments have tried to increase affordable housing numbers by insisting that housebuilders must build a minimum percentage of affordable homes. In practice as explained by the New Economics Foundation, housebuilders can wriggle out of this obligation by claiming the affordable housing makes the entire project 'economically unfeasible'. Many affordable housing elements of larger schemes were often taken on by Housing Associations but their withdrawal from the market as explained above, means more housebuilders are using FVA to get out of building any affordable housing at all.

Complaints about the slowness of the planning system for new homes are legion and long running. Again successive governments have tried to tackle the issue and failed. The UK's most comprehensive survey of SME home builders, carried out by the Home Builders Federation (HBF), Close Brothers Property Finance and Travis Perkins plc in January 2024 confirmed the top two major barriers to growth for SME developers are chronic delays in the planning system and under-resourced Local Authority planning departments. Both factors have severely impeded SME's ability to deliver much-needed housing stock and have been compounded by rapidly increasing associated costs.

Nick Clegg for the then new Government in 2010 announced the creation of 9 new garden towns. By 2024 not one has been built. The extra Government funding for the 155,000 new homes envisaged? £2.5 million – that's less than £20 per home.

Looking at the UK construction industry itself there are several issues – some of them relate to inefficiencies in industry practices but the most important relate to capital markets and financing:

- an industry slow to move to industrialisation through MMC and DfMA (an analysis of the US and UK construction market here)
- financialisation of rented homes (Springer 2021 paper here)
- the major housebuilders controlling the rate of sale of new homes in order to maintain prices, known as 'the Absorption Rate'. This was confirmed by Sir Oliver Letwin's report for the then Government in 2018.

"The market" does not have solutions for the provision of affordable local authority housing.

## Safety issues

The state of disrepair of the current affordable housing stock mentioned above is also a factor in itself. The cost of remediating cladding and fire escape safety for high rise buildings is in the billions of pounds and 7 years after the Grenfell Tower tragedy is yet to be fixed, so remains an ongoing daily worry for homemakers in high rise buildings.

The other high profile safety issue in affordable rental homes in the UK is damp and black mould. In December 2020, 2 year old Awaab Ishak died from a severe respiratory infection caused by prolonged exposure to damp and mould in his home.

In a September 2023 joint Ministerial statement issued by the Secretaries of State for Health & Social Care and DLUHC (Levelling Up Housing & Communities) it was said people living in rented homes are more likely to live in a home with damp and mould than owner occupiers. Despite being a member of the G7 the UK they estimated the number of homes in England with damp and mould ranged from 4% to 27% of homes, or 962,000 to 6.5 million households (estimated numbers due to difficulties in standardising collected data).

## Security issues

One of the biggest issues for homemakers in private rented homes is lack of security of tenure. Most tenancy agreements are Assured Shorthold Tenancies which tend to be fixed for 12 months and can then be terminated on 2 months notice for no reason. This leads to a feeling of instability and insecurity for homemakers in their own homes, the very space which is supposed to be their sanctuary.

Changing both the length of tenancies and termination provisions are therefore extremely important to homemakers to give them the security they deserve and are 2 major planks of rental reform campaigned for by Crisis, the UK homelessness charity.

# 2. What is the global size?

## Shortage of supply

According to the World GBC (Green Building Council) the world needs to build **2 billion new homes over the next 75 years.** The house building sector is already responsible for between 17 and 21% of global carbon emissions so there is an unprecedented dual issue of a housing crisis and a climate crisis.

UN Habitat's current report on housing says the world needs to build **96,000 new affordable homes every day** to house the estimated 3 billion people who will need access to adequate housing by 2030.

## Global planning

The Centre for Demographics & Policy 2024 Demographia report on International Housing Affordability shows a continuing 20 year trend of housing shortages. It finds an international planning orthodoxy which relies on urban containment, strategies of greenbelts, urban growth boundaries and compact city policies (densification) concluding, 'the most severe housing affordability losses have occurred in markets that follow the international planning orthodoxy,' with the primary victims being young people, minorities and immigrants.

## Construction industry global emissions

The UN Environment Programme report in September 2023 confirms that 'the buildings and construction sector is by far the largest emitter of greenhouse gases, accounting for a staggering 37% of global emissions. The production and use of materials such as cement, steel, and aluminum have a significant carbon footprint. Yet it has received only a small fraction of climate-focused development funding, compared to other sectors.'
To date, much of the sector's focus has been on reducing the "operational" carbon emissions of buildings from heating, cooling, and lighting. Solutions to reduce the buildings "embodied" carbon emissions from the design, production, and use of materials such as cement, steel, and aluminum – have lagged. The UNEP concludes 'international action and collaboration must bring together all stakeholders from across the entire lifecycle of the buildings sector, both within informal and formal settings.

# 3. What independent research is there?

## Affordable housing

In 2022 the World Economic Forum highlighted 3 ways to reinvent affordable housing in a post pandemic world:

1. Home as a Health solution – WHO research confirms poor housing conditions are linked to debilitating illnesses
2. Investing in sustainable methods that work - streamlining supply chains, reducing greenhouse gas emissions and creating employment opportunities within the community.
3. Scaling to reach 1 billion homes – modular homes are offering global solutions.

"By supporting innovators with the capacity to expand quickly and effectively, together we can embrace a new global housing framework centred on sustainable and scalable shelter solutions. Only through collaboration can we reinvent affordable housing."
World Economic Forum

According to World Population Review, the UK is one of a number of countries (including Australia, USA, Canada, China & New Zealand) where housing is the hardest to afford.

HOMEIX

## Planning environment

The global housing crisis is not just financially driven, it's also caused by restrictive planning policies in developed countries with some intended and some unintended consequences. According to The Centre for Demographics & Policy 2024 report on International Housing Affordability urban planners have over the last 50 years successfully managed to shape housing policies to reflect their visions.

Fundamentally, these policies seek to stop the expansion of urban areas (sprawl) and increase urban population densities. This international planning orthodoxy relies on urban containment, with its strategies of greenbelts, urban growth boundaries, rural zoning (large lot zoning) on urban peripheries and compact city policies (densification). A central message of this report is that the most severe housing affordability losses have occurred in markets that follow the international planning orthodoxy.

## Technology

According to the World Economic Forum, "while new housing technologies can help cut waste and reduce GHG emissions, they are unlikely to make a dent in the global housing crisis, unless accompanied by other changes."

## UK social housing playbook for change

Closer to home the Social Rent Housing at Pace report from May 2024, a collaborative report by over 60 contributors from different disciplines sets out much of the state of play in the affordable housing market that Roger Lewis has been working on for the last 3-4 years including a focus on industrialised construction (DFMA and MMC), digital design, off site manufacturing and partnership and platform approaches.

One of the most important aspects of the report is focus on 'starting small for system activation'. Most solutions proposed for fixing the housing crisis focuses on big schemes. In fact those schemes are (in the UK) the most controversial in terms of planning and according to the Lichfields report, it takes nearly 7 years from submitting a planning application to finishing the first home on a large new home scheme.

The report puts forward an ecosystem solution with three essential components:

- Build homes in a new way
  incubate a new supply chain of factory-manufactured housing to accelerate delivery (MMC and DfMA)
- Unlock unlikely land
  such as small, brownfield sites in public sector ownership and address the associated viability and planning challenges
- Recalibrate the economics
  rethink value and unlock alternative sources of capital for social rent housing.

The plan also highlights the critical opportunity for a human-centric, outcome-led approach that embeds values into the design and delivery of new homes to benefit residents, communities and wider society

Further research by the company can be read in the data room.

HOME@IX

# HOW

## How does the project present a solution?

As set out in the 'What's the problem' section above, there are different aspects to the overarching problem of lack of affordable housing in the UK including, at the macro level, loss of usual providers (Housing Associations), planning delays, an inefficient non-industrialised industry as well as issues at the micro level such as lack of security of tenure and poor quality housing.

Solutions to these problems include Government changing planning and investment policies and whilst changes in those policies could provide meaningful solutions, they are beyond the control of SME's who need solutions they can implement on their own account to make a difference more immediately.

Numerous companies have tried to tackle the affordable housing crisis and some have succeeded on a small scale. Home@ix has a highly scaleable model that can be implemented by a single corporation to address different demographics, different regions (even different countries) by industrialising the process from design, to planning, to construction, to home management, with a focus on sustainability and building communities and places people want to live and respect.

## Solving the design

A key innovation of Home@ix is a design handbook with ready-to-go designs and using digital twins coupled with offsite Design for Manufacture and Assembly (DfMA) to offer a customisable product range to the homemaker.

Demonstrator homes are planned for 6 different regions of the country. This development of basic digital twin functionality, serves as a foundation for planning and visualization but also for real time budgeting and procurement for volume discounts. Sites for several digital twins have been identified and land secured with the first being in Tavistock, Devon. Land is secured and design finalised with pre-application information ready to be submitted to the planning authority. Discussions are ongoing with several other sites including at NMITE (New Model Institute for Technology & Engineering in Hereford). The Ever After cottage design for the Tavistock demonstrator home can be seen here. and the design intent document for the Tavistock cottage can be seen here.

In line with the affordability aspect, our flagship full specification passive home will be in place at the Cottage at Grenofen Tavistock, which provides the full specification experience as a hero aspirational product. Grenofen's ecological survey and pre-app package lay the groundwork for multiple possibilities, including a digital twin demonstrator, self-build staff and retirement housing and open-market sales. Pre-app documentation has been prepared with the next step being a meeting with the local planning authority.

Our hybrid model of materials supply and a defined route to market creates affordable, customisable housing solutions in affordable single family homes to rent. In addition to site-specific developments, larger sites are being considered under the Minerva Land Model, which includes a reversion to full value after ten years. This model prioritises affordable homes to rent and aligns with the overarching goal of creating sustainable communities.

This flexible approach is fully adaptable to different tenures (affordable rent, affordable or open market sale), different occupiers (single families, single occupiers, sharers, retirees) and different configurations plus changes based on evolving needs and market dynamics, all focused on building communities people want to live in with others.

Collaborations with digitally accountable supply chain partners and other stakeholders offer speed and efficiency as we bring people along.

The integration of digital twin technology in housing development is a key focus for Home@ix. It involves leveraging robotics and flexible manufacturing processes to enable mass customization of affordable homes. The potential impact of this approach on the housing industry is significant, offering scalability and efficiency, cutting the fat out of preliminaries and consultancy stage payment fees.

## Solving the planning

The problems encountered in the planning application process are well known. Home@ix intends to overcome those in several ways:

- The demonstrator digital twin provides a route to approval in each region. When a design is accepted by a region, it will be easier for it to be accepted on other sites in that region
- Using a design pattern book, and handbooks for planning application streamlines the design and planning process Carbon targets imposed by planning authorities are already built into the Home@ix system and unlike other companies, are fully digitally verifiable in advance
- Home@ix will focus on building small developments which already have community support before going for planning approval. Small developments and community support are fundamental to quicker planning approvals Home@ix is able to take on affordable housing obligations on behalf of major housebuilders who regard such obligations as an inconvenience

## Industrialisation

With its commitment to DfMA, industrialisation is already the way ahead for Home@ix. There is information elsewhere in this business plan about DfMA and MMC.

## Sustainability

Sustainability is built-in to the Home@ix system, from design through to materials, construction, energy use and home management. See below how the Home@ix dashboard uses technology to harness data for provide verifiable sustainable construction.

## Security of tenure

Every homemaker renter will be given a 6 year assured shorthold tenancy as standard. A 5 year tenancy is the minimum required by the Regulator of Social Housing and 6 years is the length being campaigned for by Shelter so we'll offer our homemakers tenancy agreements of 6 years

So that our homemakers don't feel tied into a tenancy that may no longer suit their needs, we'll have a tenant only break after 12 months on 2 months notice. This gives security to the homemaker but an option to leave early if they want to.

As landlords we'll contract out of the right to serve a section 21 notice so that homemakers can't suddenly be given 2 months notice to leave for no reason. This is a major campaign issue for Shelter. (Tenancies can still be terminated under the fault provisions of the Housing Act.)

## Homemaker services

The whole point of the Home@ix project is to build affordable homes and communities for homemakers and then offer support after moving in to keep their home somewhere that remains a great place to live.

The Home@ix app for homemakers has many different ways to help build and foster community not only between homemakers in the same development but between other Home@ix developments – a Homemakers members club.

Benefits such as logging repair requests, a timebanking app, instantly downloadable info (tenancy agreement, insurance policy), buildable credit score, home exchange facility, hardship fund. Our plans are detailed and can be read here.

## Sales and marketing

We intend to employ direct-to-consumer (D2C) and business-to-consumer (B2C) marketing approaches to attract customers from our target demographics. This will involve using local media, radio, and TV advertising and sending targeted emails to potential customers from sources like local housing waiting lists, affinity groups, nurses, young professionals, police, sports clubs, teachers, fire service, junior doctors and many more, depending on location.

We'll also have Home@ix branded hoardings and signs on all our property building sites. These strategies are designed to direct traffic to our website, where visitors will discover the culture of Home@ix and explore our homes online or in person at the seven strategically located demonstrator sites throughout the UK.

Our content and media selection will always be local and relevant to the area, with messages and content focused on local beauty and cultural spots, nearby places of interest, and markets. These factors will all be inserted in a master script format for the Home@ix radio and TV 60-second spots and 30-second ads.

Once testimonials are available from Home@ix satisfied homemakers they'll be inserted into the website and new ads. These will focus on the affordability and low running cost

Marketing will focus on Home@ix homes being built to "high efficiency, super green standards, that will keep energy bills way down - using local suppliers and local climate data to ensure the materials and design are optimal for the location and your needs. So jump on our website now, some of these homes are available at 75% of market rental value to qualifying applicants."

"Home@ix - New ways need new words"

## Bringing it all together

This is the Home@ix difference. There are suppliers and house builders using MMC, they have industrialised their processes. But as will be seen from some of the high profile failures of MMC factories, MMC is not the a magic bullet – there needs to be more.

Some housebuilders have used BIM in a design, allowing customisation for a feel of designing your own home.

Pattern book housing designs have been used in the private housing sector for some years but there's been limited use in the affordable homes sector. That's been generally down to affordable homes providers not having in-house technical teams with the skills to produce the pattern books.

There are housebuilders who charge affordable rents and grant 5 year tenancies.  There are housebuilders who focus sustainability, building zero carbon homes with renewable energy and go for green.

But no-one has put all the moving parts together, the digital pattern books for design, planning and construction, the customisation, digital twins, industrialised construction, sustainable materials, renewable energy, VR and AR marketing, security of tenure, carbon accounting, affordable rents, virtual sale and marketing, all on an accessible dashboard and that's the difference Home@ix plans to bring.

HOME@IX

# TECHNOLOGY

## What technology is used?

## The Dashboard

The Home@ix dashboard will be a groundbreaking platform designed to transform the housing industry by integrating advanced technologies for sustainable building practices and accurate carbon accounting.

The car industry's agency model has undergone an adaptation to a direct-to-customer hybrid approach that provides the key to the Home@ix model. The Home@ix dashboard is directly borrowed from the car industry and speaks directly to the consumer or in our case, the homemaker. The dashboard caters for both fleet buyers (Housing Associations, Registered Social Landlords or volume housebuilders needing to fulfil their affordable housing condition) and on a smaller scale, directly for individual homemakers. The dashboard is agnostic about its customers and can therefore serve both equally well.

MiHubAI construction BIM film (2.47 min watch time)
MiHub AI residential homebuilder film (2.44 min watch time)

The integration of digital twin technology in housing development is a key focus for Home@ix. It involves leveraging robotics and flexible manufacturing processes to enable mass customization of affordable homes.

The potential impact of this approach on the housing industry is significant, offering scalability and efficiency, cutting the fat out of preliminaries and consultancy stage payment fees. The challenges encountered by high profile volumetric MMC failures in their huge sunk costs and inventory heavy model requires a revaluation of their approach to ensure viability and success.Those failures have been multi factorial, including an almost total lack ofGovernment strategy (see the January 2024 House of Lords committee letter to the Government), at least 7 different definitions of MMC, the factory model (which needs steady predictable demand – the opposite of how UK volume housebuilders operate) but the failures stem from the factories involved in category 1 of MMC, volumetric modular. Category 2 (the Home@ix model) is 2D primary structural systems, populated by private sector manufacturers not demanding Government subsidy to make themselves viable, and industry commentators see this DfMA MMC model, not the factory volumetric model as the route to success for the UK housebuilding sector.

Our key innovation of using digital twins coupled with offsite Design for Manufacture and Assembly offers a customisable product range to the homemaker. This development of basic digital twin functionality, is the foundation for planning and visualization but also for real time budgeting and procurement for volume discounts.

Leveraging tools including existing blockchain technology for data transparency (Unisot), existing digital platforms for centralized data management (MiHubAI), and existing material lifecycle analysis (Madaster), and Smartxdata (the block chain data exchange), the configurator tool within the Home@ix dashboard will allow users to customize their homes, providing instant feedback on the environmental and financial implications of their choices. This user-friendly interface will offer instant feedback on choices, helping users understand the financial and sustainable impact of their decisions.

The Home@ix dashboard will provide real-time data analytics on energy consumption, material usage, and carbon footprints, enabling all types of users throughout the process to make informed decisions. The Home@ix platform will promote the use of renewable energy systems and sustainable materials and integrates with financial incentives such as rent reductions from carbon trading.

The integration of carbon accounting and market mechanisms into the affordable housing sector represents a significant step towards resolving the affordability crisis while contributing to broader climate goals.

# The Home@ix dashboard carbon accounting app

Over the past few years Home@ix has worked with existing technology companies with existing capabilities to develop the revolutionary Home@ix dashboard carbon accounting app which now includes the following key platforms:

**Mi Hub AI:**
MiHub already acts as a centralized platform for other apps, it's the swiss army knife that provides information for contractors, suppliers, and homemakers from a variety of sources throughout the life of a project from design to specification, finances, construction management, carbon footprints and post move-in management for the company and the homemaker – it'll be genuinely revolutionary.

MiHub's configurator tool will allow homemakers to customize their homes and common areas at the design stage by selecting different materials, energy systems, and design options. It will provide instant feedback on the environmental impact and cost implications of each choice. The platform will offer insights and educational content on the benefits of different sustainable technologies and materials, so users can make informed decisions. Users will be able to connect with a community of like-minded individuals and access support from experts, to help them make the best decision based on preferences and budget. Users will be able to visualize their home designs in 3D, helping them understand the spatial and aesthetic implications of their choices.

MiHub's digital platform already has the capability to integrate various data sources and tools to streamline the management of building projects. The MiHub Home@ix dashboard will integrate carbon accounting into the platform, tracking carbon savings achieved. As users make sustainable choices, they will be able to earn carbon credits, which will be recorded and managed by MiHub.

The MiHub 2024 mini brochure can be downloaded here.

The apps will provide real-time analytics on energy consumption, material usage, and carbon footprint so users can make informed decisions.

**Madaster**

The Madaster platform contributes significantly to the overall functionality of the Home@ix carbon accounting app in several ways:

**1. Material Registry:**
Madaster maintains a comprehensive digital registry of materials and products used in construction. This registry helps Home@ix accurately track and document the types and quantities of materials used in building projects, essential for calculating embedded carbon values.

**2. Embedded Carbon Assessment:**
By providing detailed information on the carbon footprint of various materials, Madaster enables Home@ix assess the embedded carbon in each of its homebuilding projects. This is crucial for understanding the environmental impact of building materials from production through to installation.

**3. Lifecycle Analysis:**
Madaster supports lifecycle analysis by maintaining data on durability, recyclability and potential for re-use of construction materials. This helps Home@ix calculate the total carbon impact over the lifetime of a building, not just during the initial construction phase.

**4. Sustainable Material Management:**
Madaster promotes the use of sustainable materials by highlighting those with lower environmental impacts and higher potential for reuse. This aligns with Home@ix's goal of promoting sustainable housebuilding practices.

**5. Waste Reduction and Circular Economy:**
By facilitating the tracking and documentation of materials, Madaster helps reduce construction waste and promote the circular economy. Home@ix can leverage this capability to advocate for reuse and recycling materials, thus minimizing the carbon footprint associated with new material production.

**6. Transparency and Compliance:**
Madaster's transparent and detailed material records help ensure compliance with environmental regulations and standards. Home@ix can use this data to provide evidence of sustainable practices and carbon reduction efforts to stakeholders, including regulators and investors.

Overall, Madaster provides essential data and tools for accurate carbon accounting, promoting sustainable material use, and supporting lifecycle analysis for the Home@ix carbon accounting app, thereby contributing to more sustainable and environmentally friendly building practices and providing measurable data for the Home@ix SDG's.

Home@ix has signed contracts to become one of a limited number of Pioneer partners of Madaster. Onboarding of Home@ix and its supply chain partners has begun.

**Unisot**

Unisot is a blockchain-based platform which plays a key role in helping the Home@ix carbon accounting app with materials' verifiability and sustainability:

**Data Transparency and Traceability:**

Immutable Records:
Unisot uses blockchain technology to create immutable records of all transactions and data entries. This ensures that once data is recorded, it cannot be altered or tampered with, providing a high level of trust and transparency.

End-to-End Traceability: By leveraging blockchain, Unisot enables end-to-end traceability of materials from their source through to their use in construction. This helps verify the origin and sustainability credentials of materials, ensuring they meet environmental standards.

**Accurate Carbon Accounting:**

Real-Time Data Integration: Unisot can integrate real-time data from various sources, including suppliers and manufacturers, to provide up-to-date information on the carbon footprint of materials. This allows Home@ix to perform accurate carbon accounting and track emissions throughout the supply chain.

Smart Contracts: The use of smart contracts on the Unisot platform automates the verification and validation processes. Smart contracts can automatically enforce sustainability criteria and carbon accounting rules, reducing the risk of human error and ensuring compliance with sustainability goals.

**Sustainability Verification:**

Certification and Compliance: Unisot can store and verify digital certificates and compliance documents related to sustainability standards. This ensures that materials used in construction have been verified by third-party certifiers and meet the required sustainability criteria.

Audit Trails: The blockchain provides a complete audit trail of all transactions and data entries needed to verify sustainability claims of materials. This auditability is crucial for regulatory compliance and building trust with stakeholders.

**Enhanced Collaboration:**

Data Sharing: Unisot facilitates secure and transparent data sharing among all stakeholders in the construction supply chain, including suppliers, manufacturers, builders, and regulators. This collaborative approach ensures that all parties have access to accurate and consistent information on material sustainability and carbon footprints.

Interoperability: Unisot's blockchain platform integrates with other systems and platforms used by Home@ix, such as Mi Hub and Madaster. This interoperability ensures seamless data flow and enhances the overall functionality of the Home@ix carbon accounting app.

**Supply Chain Optimization:**

Efficient Logistics: By providing real-time visibility into the supply chain, Unisot helps optimize logistics and reduce the carbon footprint associated with transportation and storage of materials.

Risk Management: The platform can identify and mitigate risks related to material sourcing and sustainability, ensuring that Home@ix can make informed decisions and maintain a sustainable supply chain.

In summary, Unisot enhances the Home@ix carbon accounting app by providing robust tools for data transparency, traceability, and verification. It ensures the accuracy and integrity of carbon accounting and sustainability claims, facilitates collaboration among stakeholders, and optimizes the supply chain for sustainable building practices.

Conclusion
The pursuit of affordable housing solutions requires collaboration, innovation, and strategic partnerships. By leveraging digital twin technology, sustainable DfMA construction methods and strategic site selection, our aim of creating affordable, high-quality housing can be achieved.

## Expected outcomes

The expected outcome is that the first 176 homes will provide the AI learning for the Home@ix configurator so that the remaining homes of the 1,750 total can be built in collaboration with homemakers, their community and the planning system in a way that is currently inconceivable. The Home@ix model will show that the planning, pattern book design, passported supply chain and ongoing data driven savings can deliver affordable homes to rent that people want to live in.

HOME@IX

# WHY

**1. Why does the problem need to be addressed?**
Affordable housing for rent is a serious issue in the UK that needs addressing. The problem is set out in the What section of the business plan. The April 2024 Knight Frank report on single family homes for rent in the UK found, 'the number of houses available to rent across the UK has dropped 41% compared with the 2017-19 average. The fall has been particularly acute for two and three bed houses' which is the market targeted by Home@ix. It's a growing problem.

The same report found the reduction 'partly reflects the fact that renters are staying in existing properties for longer and moving less often. This means that properties are not cycling back onto the market as quickly or as often as they once did. In 2012, just 19% of all private renters had lived at their current address for more than five years; now that figure is 30%.' Another indication the problem is getting worse.

Affordability in the sales market has worsened considerably since 2008. Recent interest rate rises and higher mortgage costs have added to those pressures. According to Knight Frank, 'This has resulted in an increase in demand for good quality rental housing from long-term renters, including more families.' There is more demand for the type of homes Home@ix is looking to build. Home@ix is looking for long term, family renters who are looking for homes and communities to live in.

**2. Why is the project being structured in this way?**
Focusing on SDG's, ESG's and adding social value aligns with the long term goals of Home@ix as a not-for-profit company. The importance to Home@ix of what social value to add and how to do that can be seen elsewhere in the business plan. How this business model fits with the Home@ix culture and vision can be seen in the culture section of the data room.

The Knight Frank report referred to above found the average size of SFH schemes is getting larger, 'from an average of 76 homes for current schemes to 94 for homes under construction and 176 homes for schemes in the planning pipeline.' This is not the development size Home@ix is targeting. Those larger schemes tend to be more controversial with both planners and local neighbours. By focusing on smaller schemes, Home@ix aims to streamline the coproduction, consultation and planning process. And judging by the Knight Frank report, it seems a sound current strategy to stay out of the larger sites where it appears there could be more competition.

The project is being structured via a slim highly experienced executive team and a larger team of external advisors, professional and suppliers for cost and other efficiencies, keeping the main company as lean and flexible as possible.

HOME@IX

# HOME@IX TEAM

Roger Lewis has put together a team of experienced people and consultants with targeted expertise. Home@ix has forged key partnerships to drive innovation and build a multi-layered network of experts with a diverse pool of knowledge, skills, and resources. These collaborations have been pivotal in shaping the project's plans.

There is a slim executive board team and a slim main board with a chair and 2 NED's (to be appointed).

Construction is in-house via Verrym@ix, a wholly owned subsidiary of Home@ix.

Technology will be ring-fenced through JV arrangements with the technology outside consultants. One alternative being considered is taking an equity share and board seat on MiHub, an important IT supplier.

In a practice used in previous large scale ventures, outside consultants will be used as independent contractors for those services not needed in-house on a full time basis eg construction oversight and planning consultancy.

## Who are the management team?

## Home@ix Executive Board Team

CEO: Roger Lewis
COO & deputy CEO: Jonathan Mitchell
CFO: Jack Sully
CTO: Shakirah Akinwale
General Counsel: Nicola Evans

## Home@ix Main board

Executive team as above plus:
Non-exec Chair: Mark Bilsland
NED 1: to be appointed
NED 2: to be appointed

## Key additional personnel

## Construction Team

Verrym@ix Ltd (wholly owned by Home@ix)
CEO: John Gibson (previously CEO of William Verry Ltd)
Executive Consultant: Thomas Solle (one of Europe's leading experts on closed panel housing)

## Design & planning Team

Lichfields (planning) – independent contractors who have a 25+ year relationship with Roger Lewis. Role: to provide Government policy & strategic oriented planning advice
Pod Architects – independent contractors introduced by the COO to finalise the standard design for each region
Savills – independent contractors who have an existing relationship with Pod & COO to provide developer planning advice

## Technology Team

MiHub – independent contractor who has worked with Roger on developing new plugins to its existing BIM, slim BIM & community and stakeholder apps to create the unique Home@ix dashboard. This technology which will be a fundamental part of the Home@ix model will be ring-fenced through a JV agreement or minority stake in MiHub to protect the Home@ix IP. SaaS (Software as a Service) is not a model Home@ix will pursue.
Dietrichs – (as collaboration/outside consultant) Europe's leading experts in CAD/CAM technologies with customised modules, processing assistants and input aids for timber construction
Unisot – independent contractors based in Norway: use an advanced Asset Traceability platform & Blockchain technology to track and trace every step of a supply chain, from sourcing raw materials to delivering finished products. Allows visibility, accountability and trust through a supply chain ecosystem to verify sustainability claims and carbon accounting
Madaster – independent contractors create material passports providing a transparent and standardised documentation of the materials used, facilitating future reuse, recycling, and responsible end-of-life management.
Contrast Design experts in virtual sales presentations (including cinematic video tours), lead generation & fully automated sales engine (Contrast Design are partly in-house through being a Home@ix shareholder)

## Construction supply chain (independent contractors)

These partnerships are instrumental in ensuring transparent, consistent and comparable ways of measuring and reporting ESG performance.

Hemp Span - has developed a world leading hemp-based particle board with virtually unlimited uses and is currently pursuing Global Rights for it.
LoCal Homes – off site manufactured housing
United Welsh
British Offsite – light guage steel frames
Frame Homes – timber frames
Frametech – timber frames
Marles – prefab construction

Suppliers will be pivotal in ensuring a steady and reliable supply of materials and resources for sustainable and efficient supply chain

## Marketing Team

Contrast Design (see also marketing team above)
DRTV – direct regional advertising with Irving Martin, one of the country's leading direct marketing consultants (Irving will be partly in-house through being a Home@ix shareholder)

## Verification Team (all independent contractors)

Enable Earth - **UN accredited UN SDG advisors, consultants**
Akou - public consultation in planning, evaluating & reporting on SDG & ESG targets/contributions
Unisot – see technology team above

## Bookkeeping & building management

Orbit Property Management – have worked with Roger for over 25 years

# Roger Glyndwr Lewis

Chartered Surveyor

Advanced

Strategic planning

## Languages

Some Swedish, German and French

Eventing established the basis for professional Eventing Yard and livery business . Estate Sold 2012, final land disposals 2016

1996-03 - 2007-04

### Managing Director

*Roger Lewis Docklands, Rld Group, London, Docklands*

- West hill House Henley Limited , Rushmills Limited, Lanark House Limited,1-3 Cuba Street limited & Orchard Wharf Limited. Combined group of companies along with the property management companies Managed by Roger Lewis Docklands liaised with the companies legal adviser's, architects and other professionals driving through planning, sales, purchases and construction of various projects totaling more than £100m from 1997-2007,
- Team of professionals and investors consisted of more than 50 individuals with 12 Staff Inhouse.
- Sourced opportunities and Bank debt and equity raises as required instructing external professional teams liaising with and managing both commercial and investor relations

1996-01 - 2003-04

### Managing Director

*Redwell Investments Limited, London, Docklands*

- RLD Group
- At the request of some International Private investment clients and with their investment Capital set up series of Single Purpose property Development, Investment and Trading companies with personal equity participation
- These ventures Included, Redwell Investments Limited, Telegraph Residential Developments Limited, West hill House Henley Limited, Rushmills Limited, Lanark House Limited, 1-3 Cuba Street limited & Orchard Wharf Limited
- Oversaw operations and provided corrective feedback to achieve daily and long-term goals.

1990-06 - 2007-04

### Senior Partner

*Roger Lewis Docklands Real Estate Consultancy, London, Docklands*

- Set Up Roger Lewis Docklands
- Specialist Real Estate Consultancy for Commercial Real Estate , in London Docklands , 53 rd largest UK consultancy, according to RICS published Data , by value of instructions by 1996
- 1996 - Roger Lewis Residential
- Sales and Lettings of residential properties
- Skilled at working independently and collaboratively in team environments
- Organised and detail-oriented with strong work ethic.
- Proven ability to develop and implement creative solutions to complex problems.

1986-09 - 1990-06

## Trainee Surveyor

*Rapleys, Prudential Assurance, London Shop Plc, Hillier Parker, London, Mayfair*

- Completed training for RICS at The Pru,London Shop and Hillier Parker gained broad spread of experience - working in Management Surveying and Investment and Research rolls
- Directly reported to Research Director of London Shop PLC during the hostile takeover by Peel Holdings
- Appointed as Junior Surveyor helping to to set up Hillier Parker's London Docklands Office March 1989
- Valuation, Office Agency, Development and Investment Agency, Site Finding
- Sourcing of investment opportunities through existing network whilst also developing new relationships
- Clients included Nordic Construction Company, London and Edinburgh Trust, St Andrews Land, Warleggan Estates, Property Enterprise Trust, London Docklands Development Corporation, Port of London Authority Cable and Wireless and many others.

1985-06 - 1986-09

## Trainee Valuation Surveyor

*Shell UK, London*

- Shell UK group , Trainee Valuation and Management Surveyor

- Built early spreadsheet for Rating Assessment of St Fergus Gas Terminal in Lotus 123, using Contractor's principle Development Appraisal and sophisticated Valuation/ Investment appraisal. Developed core competencies in DCF analysis including Monte Carlo Simulations
- Assisted in negotiating rent review of 30,000 sq ft office in Little Adelphi, Strand, London WC2 . 3rd Party Arbitration successful award for Client Group.

## Education

1986-01 - 1990-04

*MRICS - Royal Institution Of Chartered Surveyors*

1984-01 - 1988-04

*Polytechnic of the South Bank*
2.1 Estate Management

1981-01 - 1983-04

### A Levels

*Kent School - Hostert*
Economics (Grade A) and Law (Grade B)

1976-01 - 1981-04

*Warriner School - Bloxham*
8 O'Level Passes including English, Maths and Physics.

## Additional Information

- DOB 13th September 1964 , 58 years young
- Married to Johanna with Two Children Rhiannon 17 and Rasmus 13
- Been Based between Sweden, London and Cardiff since January 2020
- Hobbies & Interests: , Student of Politics, Philosophy and Economics, Guitar Player EX County level Rugby Player

# CURRICULUM VITAE

**JONATHAN MITCHELL**
**Address:** 5 Hayward Road, Thames Ditton, KT7 0BF
**Tel:** 020-8873-0058 (H) 07717-730683 (M)
**Email:** jonmitchell96@yahoo.co.uk

**Skills:**
I'm an experienced senior property banker, latterly as principal for a property developer. I've got strong leadership and interpersonal skills. Direct experience of senior debt transactions, development management and planning submissions, CMBS, syndicated loans, mezzanine and profit share facilities. I've got extensive property investment and property development expertise, as both a lender, member of credit committee and from a corporate borrower perspective. I'm an effective team leader with proven experience of relationship management, management of substantial property loan account portfolios and direct responsibility for a team of account managers. I've successfully guided teams in achieving new business targets and effective loan account management including debt recovery and 'work out' situations.

**April 2010 to June 2024** Director – Castlebrooke Investments
I was recruited by Carisbrooke (renamed Castlebrooke in 2015) to assist with their ongoing requirements for debt and equity and act as chief liaison with their existing JV partner Anglo Irish Bank. The portfolio comprised commercial investment and development properties and several land holdings. Following extensive discussions with a third-party Fund, I successfully negotiated terms to take out Senior Lender as both JV partner and lender.
From 2017 I was lead Director solely responsible for a £500m mixed use urban regeneration scheme in Belfast. The project involved detailed and outline planning applications with associated public consultations, liaisons with all political parties and public bodies including Belfast City Council, Dept for Communities NI and Dept for Infrastructure NI. A key part of the role was site assembly which included over 15 individual transactions and private treaty purchases including the purchase of a Public Square and the purchase of a Social Housing Apartment block which took some 4 years to negotiate from start to finish amid title complexities and public interest.

**Dec 2007 to July 2009** Director - Mitre Capital Partners
Asked by Alliance & Leicester to join a small existing team following the MBO by Alliance & Leicester and NM Rothschild/Lanebridge Securities of the H Ansbacher loan book. Sourcing, analysis and presentation to credit committees and ongoing portfolio management, development deals and 'added value' investment deals.
Notable Deals/Relationships
Retail scheme in York, tenant removal, successful re-letting and subsequent sale 50% profit Share
Industrial Investment, part let with additional unimplemented planning angles – fully debt servicing, 30% profit share with minimum fee.
'Workout' of a 140 House /Apartment French development scheme which was over budget and had significant construction and security issues.

**Jan 2006 – Dec 2007** Managing Director - ING Real Estate Finance (UK) B.V.
Headhunted to establish and form the new London Branch of the International division of Real Estate Finance (REF). I led the recruitment of a team, establishment of the office, implementation of

the business plan and was responsible for new business generation. Portfolio consisted of investment and development deals, lending to Core and Core + funds. Loans were approved on both UK and European assets as senior lender or with positions as arranger and/or participant on syndicated loans. I oversaw the growth of the portfolio within 14 months to €1.4bn (net hold position) and ahead of budget FYE December '07. On leaving there was a further undrawn pipeline of €400m. The role required the liaison with other international offices and involvement in cross border transactions and multi location servicing of large corporates, global Fund managers and property companies.

Notable Deals/Relationships

£450m acquisition of British Land/Tesco deal from Goldman Sachs
£180m purchase and successful syndication of City Office Building
£60m part syndication of the Gherkin
€25m Office block acquisition in Netherlands for US Shariah compliant fund. ING's first cross border Shariah compliant facility
Shopping Centre in Sweden for UK Fund
Responsibility for the first ING REF Securitisation transaction. - LEO I

**Aug 1997- Dec 2005** Associate Director - Anglo Irish Bank Corporation PLC

Team leader and a member of the London credit committee & senior lenders forum. Management of a loan portfolio of £1.5bn and fee generation of circa £4m per annum exclusive of margin income. My portfolio consisted of 75/80 active borrower relationships. I established the concept of lending against purpose built student accommodation (Unite Group) at the Bank on both development and investment transactions. Significant levels of business were also negotiated in the residential sector for development and investment.

Direct responsibility for all Borrower relationships and negotiation with clients on pricing, structure, tenure and security issues.

Notable Deals/Relationships

Unite Group – over 20 Student Development and investment schemes.Paramount Hotels – Acquisition of 19 Hotels
Development of numerous high value residential units at Wentworth, Ascot, Weybridge and Barbados & Chelsea
Acquisition and break up of 25 Petrol Station and 145 Public House portfolios.

**1994 - 1997:** Kredietfinance Corporation (Now KBC Bank) **-** Senior Relationship Account Manager in the UK commercial Investment/Development team.

**1992 - 1994:** Johnson Fry PLC **–** part of the Finance team arranging Commercial loan debt for Enterprise Zone transactions and negotiations of commercial loan facilities for internal funds and external clients.

**1989-1992:** Allied Irish Banks Business Finance **-** Manager with 'Business Purchase' and Commercial Investment transactions. Credit committee submissions and account management and 14 months in the inaugural Recoveries department.

**Other Personal Details**

**Qualifications:** BA (Hons) – London University, 6 O Levels & 3 A Levels – Colstons' School, Bristol

**Hobbies:** Golf (9 Handicap – Burhill Golf Club) Skiing, Scuba diving, Rugby & Cricket, Studying and improving my German

# Jack Sully FCCA | Chief Financial Officer

Location: **London**
Telephone: **07534271876**
E-mail: **jacktsully@live.co.uk** Linkedin: **Jack Sully**

---

A highly motivated and accomplished FCCA CFO with extensive capability in strategic, operational and change management. With over 13 years professional experience, 6 years in senior positions, in both practice and commercial roles. A solutions driven professional who has independently built finance departments from the ground up, developing efficient reporting structures to international hedge funds and HNWI investors. Long term business plan modelling skills with the ability to build and maintain working relationships with stakeholders to ensure that the business meets its financial objectives. Extensive management experience within previous roles, leading teams and overseeing projects with a combined value of over £500m. Able to work alongside all professional backgrounds and abilities, currently looking for Finance Director, CFO or consultancy position within an ambitious company.

Key Skills

- Management and statutory accounts preparation to the relevant standards (IFRS / UK GAPP (FRS 102))
- Financial modelling of 5 year business plans and investment analysis
- Business and financial analysis including investment and funding reports
- Building finance functions, setting up effective and efficient financial processes and procedures
- Financial and legal aspects of acquisitions & disposals (individual asset and asset holding corporate structures)
- Interpretation and preparation of commercial agreements including shareholding and facility agreements
- Liaising with and supporting non-financial stakeholders regarding budgeting, KPI's, financial performance and queries

---

## Professional Experience

**November 22 – Present**
**Chief Financial Officer – AssetStone Limited / Astute Capital PLC – Baker Street, Marylebone**

**Key Responsibilities**

- Created a five year financial model for AssetStone that is used in both institutional funding and equity fundraising documents. Using a variety of individual deal models, with various scenario's and sizing, to provide a company five-year forecast and cashflow. Outputs include sensitivity analysis, IRR and investment performance metrics, as well as a company financial overview used in investment presentations.
- Management of loan book and bad debt provisions. Liaising with accountants, lawyers and borrowers on the company's legacy bad debts totaling £6m.
- Application to listing of Astute PLC on the CSE (Cyprus Stock Exchange). Working with corporate finance advisers and producing the financial model for the working capital management listing report. This also included a re-audit of the previous year's statutory accounts from UK GAPP to IFRS.
- Managing financial aspects of deals with a US based institutional investor, as well as the bond issuance to HNWI for our equity component.
- Short term cashflow projections to provide management with an overview on working capital requirements and upcoming obligations.
- Ensuring all statutory accounts are up to date for PLC, collateral manager, bond issuance entity and numerous subsidiaries.

**April 2016 – November 2022**
**Finance Director (previously Financial Controller until March 2021) – Castlebrooke Investments – Berkeley Square, Mayfair**

**Key Responsibilities**

- Castlebrooke Investments is a private UK based property company that specialises in Investment, development, and asset management. The first main task was to establish the company's finance department to provide effective reporting on the company's individual asset holding SPV's (UK/Jersey registered), as well as the accounts for the day to day service and asset management companies.
- Using experience gained in previous roles, Castlebrooke Investments now has a fully functional finance department, which provides directors with monthly management accounts, investment and funders reports, annual statutory accounts, working capital and VAT reporting.
- Current assets acquired and under management include a £400m mixed-use urban regeneration, the acquisition and asset management of a £66m city tower, and a £150m city centre office development.
- Other main duties included the preparation of monthly and annual business plan budgets and forecasting reports. Providing detailed variance analysis on performance with recommendations on how to optimise and improve profitability and efficiency.
- Training and mentoring two accountants through their studies and professional work. Other wider adhoc duties consist of the administration of the company's workplace pension scheme and the hiring of new employees and employment contract set up.

**Key Achievements**

- Liaising with lenders on sourcing debt on potential and current investments. Working alongside directors to successfully negotiate refinancing for an asset with a £60m loan facility.
- Co-ordinating tax planners and lawyers on the implications of a surrender premium agreement totaling £65m.
- Financial due diligence and company overview on a successful £100m forward funding agreement, including tax and funding analysis.

---

**January 2014 – March 2016**
**Finance Manager – JLL Corporate Finance / Equitix Management Service Limited – City of London**
**(Previously apart of Jones Lang LaSalle Corporate Finance until a sale of the division to Equitix Limited in September 2014)**

- Leading a team of four accounts assistants over nine projects with a collective value of £250m.
- Preparation of monthly/quarterly management accounts and annual statutory accounts in accordance with the relevant accounting standards.
- Presenting the accounts to the board and investors, plus providing analysis on any variances and key information. This included interpreting results against the financial close and operational model, updating and reformulating when necessary.
- Budgeting and forecasting comparatives to analyse future performance, ensuring KPIs are met and using my professional skills and experience to safeguard sufficient liquidity for future debt repayments.
- Producing a monthly board pack, which includes the financials, executive summary, investment ratios, and a forecasted cash flow.
- Producing quarterly VAT returns and liaising with all stakeholders including lenders, shareholders, non-financial stakeholders, HMRC, and auditors.

---

**June 2011 – December 2013**
**ACCA Student Accountant - Rawlinson & Hunter – Surrey/London**

- Preparing annual accounts in accordance with IFRS / UK GAAP. Liaising with both management and the client to prepare their financial statements using different accounting

packages including Vision, Sun accounts, Sage, Caseware and Xero. Producing an analytical review against prior years providing detailed notes on any material variances.

- Preparing management accounts and VAT returns for SMEs and high net worth individuals. Generating monthly / quarterly accounts, providing the client or finance director with detailed performance analysis. This included supervision of a team of five juniors / part qualified accountants. Producing monthly Intrastat and EC sales lists for clients trading in the EU.
- Accounts payable and receivable management for large limited companies. With ownership over the ledgers, I dealt with the client's customers and suppliers, chasing payments and processing fortnightly payment runs.
- Onsite client visits twice a week, where I provided clients with face to face financial management duties. I visited two clients based in London, including an established art gallery and pharmaceutical organisation.

---

**January 2010 – June 2011**
**Accountant - K4P Financial & Professional – Wimbledon**

- Preparing statutory accounts for Sole Traders, Partnerships and Limited Companies. Using the information sent by the client, prepare lead schedules to produce an income statement and balance sheet using the IRIS accounting software. This also included occasional audit work and site visits.
- Reviewing the preparation of outsourced work of client's accounts and personal tax, making adjustments where necessary, before sending on to the relationship manager.
- Preparing personal tax computations and annual returns using both IRIS personal and business tax. Producing trade and capital allowances computations using my professional knowledge of disallowable expenses and capital allowances.

**Qualifications**

Said Business School, University of Oxford — March 2022 – April 2022
- Real Estate Program

Kaplan & London School of Business and Finance — August 2010 – July 2013
- Association of Chartered Certified Accountants (ACCA) – option papers included Advanced Taxation (P6) and Audit & Assurance (P7)

London College of Accountancy — March 2009 - June 2010
- Certified Accounting Technician (CAT)

The John Fisher Catholic High School — September 2001 - June 2008
- A-level's: Business Studies (B) Accounting (B)
- 9 A-C GCSE'S including B in Math's and Business

**Achievements and interests**

- 2005 National Schools Athletic Finalist Over 200m competing in Oxford after a year of qualifiers
- National Rugby Sevens Finalist where we reached the final out of the best 110 rugby schools in the UK at Rosslyn Park Stadium
- Member of the 1ST XV John Fisher Rugby Team
- Member of the John Fisher Chapel Choir that sang at the Royal Albert Hall during a national competition final
- Entrepreneurship and business analysis
- Food and travel enthusiast

**Data and Digital Transformation Leadership**

- Spearheaded the adoption of digital transformation strategies for real estate clients, both commercial and residential, leading to a 15% boost in client productivity and a 20% increase in revenue. This was achieved through the implementation of tailored technology solutions and AI integration, significantly streamlining operational efficiency and project delivery timelines.
- Championed innovation in resident engagement by optimising processes with IoT technologies, markedly improving satisfaction levels, operational efficiency, and reducing maintenance costs. This strategic approach not only enhanced resident experience but also contributed to cost savings.
- Directed strategic business analysis for process reengineering across real estate programs, leading to substantial operational improvements and cost savings. Aligned operations with social responsibility goals, facilitating sustainable growth and demonstrating a deep understanding of market needs and technological solutions.

**Building Safety, Compliance, Risk, Sustainable Retrofit, and Quality Assurance:**

- Through technology product development, created and brought to market real estate technology products focused on building safety, compliance, risk management, sustainable retrofit, and quality assurance. These products were instrumental in driving new revenue streams and establishing market penetration, demonstrating a keen expertise in product management.
- Formulated go-to-market strategies for these innovative solutions, addressing critical industry needs in building safety and sustainability. This strategic orientation not only solidified client trust but also positioned the firm as a leader in integrating sustainability and safety into digital transformation efforts.

**Consultant - Program Operations:** **(April 2021 – Sept 2022)**
**Foundervine**

**Innovative Accelerator Program Management:**

- Orchestrated startup and scale-up accelerator programs, implementing innovative strategies that reduced human input by 60%, significantly enhancing program scalability. This approach increased applicant volume, exceeding KPIs, and streamlined the selection process, reducing both assessment duration and bias.
- Overhauled HR processes and application workflows to protect the organisation from overpayments and redundant resource allocations, ensuring operational efficiency and resource optimisation.
- Adopted agile project methodologies to boost the performance of individual programs, fostering improved teamwork and organisational growth. This led to a diversification of program offerings, expanding our reach to a broader clientele.
- Founded a Project Management Office (PMO) which played a pivotal role in enhancing internal knowledge transfer, substantially improving overall efficiency and client satisfaction.

**Energy Associate and Data Analyst:** **(Oct 2019 – Oct 2023)**
**CLS Energy Ltd**

**Energy Assessments: Data Collection, Analysis, and Reporting:**

- Conducted comprehensive energy assessments through meticulous data collection and analysis from surveys and models, driving enhancements in energy efficiency and sustainability across project designs.
- Integrated sustainable solutions and utilised advanced environmental impact modelling software, leading to a reduction in carbon emissions. Notably improved energy efficiency by 20% and user experiences through automation in asset management, which also contributed to a 20% decrease in carbon emissions.

**Strategy and Engagement: Business Cases, Sustainability Strategy, and Stakeholder Involvement:**

- Led the strategic development of business cases and sustainability strategies, ensuring alignment with broader organisational goals through effective stakeholder interviews and workshops.
- Enhanced project viability and secured senior management support by developing BIM execution plans for public procurement bids and applying ISO 19650 standards for superior information management practices. This approach revolutionised asset management and compliance, notably through ESOS, and was instrumental in creating client-specific energy dashboards, yielding over £500,000 in operational savings.
- Promoted energy awareness and facilitated behavioural change through innovative educational content, significantly improving operational savings, leasing revenue, and reducing tenant turnover by implementing strategic asset performance management and conducting targeted energy audits with bespoke recommendations.

**Consultant/ Contract - Project Information Management, PQS Services** **Aug 2019 – Aug 2023**
**Client -** MANUK Cultural Centre **Project -** Old Kent Road Redevelopment, £11m

**Comprehensive Project Support for Religious Community Development:**

- Led notional projections, cost planning, and provided monthly financial report updates, ensuring financial transparency and effective budget management throughout the development process.
- Managed supply chain, conducted tender/bid analyses, and identified value engineering opportunities, optimising procurement and construction phases for cost efficiency and quality.
- Directed programme and risk management, allocated project resources efficiently, and maintained critical project timelines, ensuring key performance milestones were met on schedule.
- Implemented BIM management and facilitated stakeholder, end-user, and community engagement, securing BREEAM excellent benefits in-use and enhancing asset information management.

**Project Manager (Commercial, Contracts Management – Prince 2, NEC3, JCT)** **March – Sept 2018**
**Employer –** GSCI Consultants **Project –** Science Gallery London, £13m, KCL

**Quality and Contract Management for Science Gallery London:**

- Managed quality and contract negotiations, resolving numerous disputed change requests and client variations, ensuring project specifications and quality standards were maintained.
- Engaged key stakeholders and resolved conflicts between the main contractor and client department leads, facilitating smooth communication and project alignment.
- Chaired workshops for commissioning and a 'soft landing' handover, coordinating with client assets/operations departments, end-users, and managers to ensure seamless transition and operational readiness.
- Collaborated with KCL's procurement team in packaging and evaluating JCT and NEC3 tender submissions, enhancing the tender process and ensuring compliance with procurement standards.
- Streamlined project delivery by eliminating critical path bottlenecks, leveraging JCT clauses to reduce construction package durations, and suggesting sequence changes and alternative suppliers for long-lead items, significantly improving project timelines.

**Project Manager (Quantity Surveying, Programming, Contract Administration – RICS Practice)** **Sept 16 – Nov 17**
**Employer -** PSP Consultants Ltd **Project(s)** – Great Scotland Yard Hotel £51m, Sawmill Studios £5m & Archway Rd £8m

**Efficient Design and Cost Savings at Great Scotland Yard Hotel:**

- Directed fit-out and M&E design management, leveraging IT for effective stakeholder communication. Achieved significant cost savings (£300,000) by proposing a safer, more cost-effective bar centrepiece design and reduced manufacturing lead times, saving an additional £140,000.

**Optimised Handover and Soft Landings:**

- Enhanced off-plan sales and customer satisfaction by collaborating with sales and marketing for content development, optimising resident management sourcing, and expediting defect resolution, thus improving handover efficiency.
- Improved design coordination and reduced costly variations by streamlining design processes and approval policies among teams, manufacturers, and client management.
- Ensured on-time project completion by negotiating with planners, building control, and insurers, and managed comprehensive O&M (Operation & Maintenance) manuals and digital Home User Guides for occupants.
- Secured over £93,000 in savings and minimised resident move-in delays from 8 months to 4 weeks by efficiently re-engaging suppliers and utilities following a main contractor's bankruptcy, demonstrating exceptional crisis management and project delivery skills.

**Design Manager,** then **Assistant Project Manager - Main/ Principal Contractor** **Feb 13 – Sept 16**
**Employer –** Bay Construct **Project(s)** – Plaza (Tender), Hotel Cumberland, Parr Street

**Design Management of Live Ongoing Projects:**

- Led design management across significant projects like Parr Street – Mixed commercial (B1) and 25 residential units, Hotel Cumberland (Marble Arch), and Pre-Construction development at Oxford Street's Plaza, aligning with RIBA work stages for seamless project execution.
- Integrated extensive datasets from design and client teams into a common data environment, enhancing information sharing, reducing errors, and improving delivery timelines. This approach ensured project alignment and facilitated efficient stakeholder management throughout the construction phases.
- Coordinated post-completion activities, including contractor, agent, and resident communications, to resolve any issues, ensuring smooth project handover and commissioning. Advanced project documentation and control processes were established, adhering to statutory requirements, insurance, building control, planning, and BREEAM standards.

**Commercial Procurement/Bidding/Tender of Pipeline Projects:**

- Advanced commercial management practices by refining the bid and tender processes, significantly improving cost efficiency and project valuation accuracy through detailed scope and specification analysis.
- Directed the development and updates of bills of quantities and cost plans with rigorous cost analysis, supporting informed decision-making and financial planning. Collaborated closely with quantity surveyors and project teams to negotiate contracts, optimising project financials while ensuring compliance with planning and building regulations across all project stages.

# CURRICULUM VITAE

## Dr Mark Christopher Bilsland

Padwicks Farm
Bepton
West Sussex
GU29 0LY

| | | |
|---|---|---|
| *Date of Birth* | : | 18th June 1959 |
| *Place of Birth* | : | Folkestone, Kent |
| *Nationality* | : | British |

**Diligent and highly experienced c-suite executive with extensive UK and international experience in a diverse range of businesses.**

Mark has Board level experience in retail, pharmaceutical and property companies as well as the energy industry, and has been involved not just as a director, but as a mentor, in conflict resolution and in financing initiatives. Recent activities include general advisory services to Access Corporate Finance Partners Limited as well as exploration and production and business advisory to Marine Low Carbon Petroleum Ltd, a company promoting technology for near carbon neutral power generation from North Sea gas resources.

Over 30 years' experience in the oil and gas industry, managing listed and private companies, with assets and operations in the UK North Sea, Eastern Mediterranean, Western Siberia, Kazakhstan and Australia, with a PhD in Petrophysics from Imperial College London, and a Degree in Geology from the University of Nottingham.

Mark worked for Enterprise Oil, a leading London listed oil and gas independent explorer and developer for over 15 years in a variety of technical and senior management capacities in the UK and overseas. These roles included Technical and Commercial Manager for the UK North Sea, General Manager for Australia based in Perth and leadership of the Corporate Planning and Project Evaluation teams. Mark then joined Khanty Mansiysk Oil Corporation (KMOC) in Moscow as COO and General Director of Russian operations and managed the transformation of KMOC from a local West Siberian explorer to a mature production company, increasing production from 2,000 bopd to 20,000 bopd, ultimately selling KMOC to US independent Marathon Oil. While in Russia, was part of the start-up team for Russian services group Integra, listed on the LSE at $2 billion in 2007, as well as running a retail franchise operating business (including UK brands Monsoon Accessorize and Build-a-Bear Workshop) and investing in Russian residential property projects. Mark has since worked as Chief Operating Officer, Chief Financial Officer and Chief Executive Officer in a number of start-ups in exploration, production and oil services sector and was on the Investment Committee of private equity group ICG with respect to energy investments.

# CURRICULUM VITAE

**NICOLA EVANS** LLB MSc Solicitor
Address: Tavistock, Devon
Mobile: 07789 263408
Email: nicola@lowergrenofen.co.uk

Role in Home@ix group: in-house legal counsel
Responsibilities: advising on and drafting corporate governance policies (including SDG & ESG) board member with overview/oversight responsibilities for group governance and strategy, monitoring SDG & ESG compliance, mentoring & developing younger team members, staff welfare, advisory role in creating diverse group team, stakeholder engagement, instructing external counsel and liaison with professional team (planning, construction) and shareholder liaison

Legal work experience:
1996-2003 in-house counsel (founder and joint shareholder with Roger Lewis) to Redwell Investments and other private property investment and development companies to managed disposal in 2003-2007.
Responsibilities: front facing with private bankers and institutional lenders, outside counsel, planning and construction team, financial and other reporting to lenders, all shareholder liaison
1996-2003 Miller Evans & Co, founder partner in property law firm, Docklands E14 (now merged with Kidd Rapinett)
1994-2003 NJ Evans & Co, founder partner, corporate law practitioner, Docklands, London E14
1987-1994 Bennett Taylor Tyrrell salaried partner (now merged with Howard Kennedy), New Cavendish Street, London W1
Current: on the Solicitors Roll but not holding a practising certificate

Other qualifications & experience:
2012 to date: Created Ever After, outdoor wedding venue becoming the country's leading luxury elopement wedding specialist
2008-2018 Volunteer NHS psychotherapist (Plymouth)
2008-2010 MSc counselling & psychotherapy Bristol University (Distinction)
2004-2008 Volunteer complementary therapist Terrance Higgins Trust Bristol
2003-2004 Holistic massage diploma at Bristol College of Massage & Bodywork
1990 – 1994 volunteer business advisor for Princes Youth Business Trust
1990 to 1994 – volunteer with London Electricity Consumer complaints board (pre-Offgem)

Education:
Qualified as solicitor 1989
College of Law Chancery Lane: 1986
Undergraduate degree (1982-1985): LLB in law
Secondary: Kent School, Hostert, BFPO 40 (Germany)

HOME@IX

# IMPACT

**1. What is the overall impact**

The impact for Home@ix is relatively easy to measure in some senses – have we reached our target of building 1,750 affordable homes to rent over 5 years? Have we contributed to our homemakers happiness as set out in that section of this plan. Have we increased their feeling of security and community?

There's also the impact on the environment, through the introduction of the sustainability goals supported and measured by the Home@ix dashboard which applies through the supply chain down to the individual home.

The impact on the directly employed and outside contractor workforce in terms of diversity, equality and inclusion – changes since the base line and since the last year, over 5 years, over 10 years. What has changed? What about training, have people progressed in their chosen jobs? Are they happy in their jobs?

Renewable energy will be generated for each new home. Homemakers will make savings on their energy bills as a result of renewable energy and well built, well insulated homes.

Creation of new green spaces in each community development will add to the wellbeing of those of who live in the developments and nearby.

**2 How is this shown by individual SDG's in detail**

**SDG No 4: Quality education** – sponsoring education and training opportunities for under represented people in the construction industry. From a base line of women in the workforce of partners, suppliers and Home@ix at the start of the project, Home@ix will through a proactive programme of training, mentoring and considered appointments increase the number of women involved in the construction of its homes at all levels, in its own direct employment, particularly at C suite level and set ambitious targets for employment and involvement of ethnic minority and disabled people. Home@ix will be introducing a bursary system available to its homemakers and their adult children to help disadvantaged people access further and higher education.

**SDG No 5: Gender equality** – a targeted programme for jobs, training and pay aimed at women in the construction industry and throughout the supply chain, including a programme for the company's own workers at all levels of the company.

**SDG No 7: Affordable & clean energy** – to be provided in the homes built by the company and also the company's own energy use. The company plans that all its new homes will under this project will be fitted with Varmt från Solen Heating Systems and developments will have ground source heat pumps which when combined with the passive haus design will provide 100% renewable energy for every home. The company will be able to track and account for its own energy use for each construction project through its carbon accounting apps for all materials and contractors.

**SDG No 8 : Decent work & economic growth** – Home@ix has and will continue to invest in new technology and innovation to provide high quality and well paid jobs. It will encourage creativity and entrepreneurship in its own workforce and supply chain. Home@ix's revolutionary dashboard tool includes a design configurator for homemakers, real time financial information for homemakers and contractors, digital carbon passports for all construction materials and carbon accounting, all of which contribute to well paid jobs for designers and innovators and to economic growth for business owners and homemakers.

**SDG No 9:** Industry Innovation & infrastructure - the Home@ix dashboard, home design, digital home passports and data capture will be part of a groundbreaking platform designed to transform the housing industry by integrating advanced technologies for sustainable building practices and accurate carbon accounting

**SDG No 10:** Reduced inequalities - promoting the social and economic inclusion of all, irrespective of age, sex, disability, race, ethnicity, origin, religion or economic or other status. In its dealings with homemakers, supply chain partners, contractors and all employees Home@ix is committed to proactively seek out, include and be a cheerleader for all its people and ensure all new hires are carefully considered through an inclusive lens.

**SDG No 11: Sustainable cities & communities -** access to adequate, safe and affordable housing, participatory, integrated and sustainable human settlement planning; safe, inclusive and accessible, green spaces, in particular for women and children, older people and people with disabilities. Home@ix is committed to a program of building affordable housing which is safe for all its homemakers who will be able to choose community space at the design stage including green spaces for growing and mixing. Home@ix homemakers app will provide easy ways for homemakers to contact their landlords, time bank for their community, join the company homemakers panel, get real time information about their home energy use, home exchange information, see and post on the community bulletin board, build credit scores for rental payments.

**SDG No 12: Responsible consumption and production** - have measurable targets for sustainable management and efficient use of natural resources including waste generation, the promotion of lifestyles in harmony with nature. Home@ix has already committed to zero carbon building and selling surplus carbon credits. More detailed information on the Home@ix proposals for carbon credit trading can be read in this paper as part of the business plan.

**3. Are there any non SDG impacts?**

One major non SDG impact is whether our Home@ix homemakers are happy in their new homes. There are various additional non-SDG services we'll be offering our homemakers which are set out in detail here. The creation of hardship funds for homemakers who've hit hard times and the community support through the app, the time banking and online signposting to other support networks will help to foster a sense of wellbeing for homemakers.

We'll find out the impact of those non SDG benefits by asking our homemakers through the app and through the annual Akou audit of our social impact. We know communication will be a top priority for our homemakers. We'll have to balance automation (preferred by many younger people) against human interaction. The GoZego research shows homemakers prefer digital options for minor matters and in person help for more important things. Younger homemakers expect community tech such as mobile app for repairs & energy efficient appliances

We can canvas feedback via the app and via a homemakers panel. As the number of developments grow, the panel would grow in size. There are options to bring homemakers onto the main board and onto sub-committees, maybe as observers on the main board if they didn't want to be full board directors.

There's more about non-SDG impacts in our Homemaker's Happiness section of the business plan here.

**4. Can the impact be measured?**

Outside independent assessors Enable Earth have been engaged under a 10 year audit contract to assess and report annually on Home@ix progress towards meeting its SDG targets. Home@ix technology partners Unisot and Madaster's systems also provide detailed verification information on carbon data.

All SDG's targets will have been chosen with impact measurability in mind.

Sadly 'greenwashing' has become an increasing problem globally. The UN warns 'Greenwashing presents a significant obstacle to tackling climate change. By misleading the public to believe that a company or other entity is doing more to protect the environment than it is, greenwashing promotes false solutions to the climate crisis that distract from and delay concrete and credible action.'

In the light of the greenwashing concerns, Home@ix has spent the last few years devising a credible system of external verification by trusted partners who will independently report on the company's progress (or otherwise). That system includes collaboration with a number of leading innovators in their field who are listed here in the customers/suppliers section.
All results, good, bad and indifferent will be published online.

Future research should explore the scalability of the Home@ix model in different geographic regions and socio-economic contexts. Additionally, studies should investigate the long-term impacts of sustainable building practices on housing affordability and environmental sustainability.

There's more about impact measurement in the section on Homemaker Happiness here.

HOME@IX

# 1. Financial model

There is a comprehensive spreadsheet in the data room (too large to attach here)

The model contains separate spreadsheets in the following tab order:

- Profit & loss 10 years
- Balance sheet 10 years
- Cashflow 10 years
- Detailed profit & loss
- Detailed balance sheet
- Detailed cashflow
- Operating costs
- Finance costs
- Taxation
- Deal overview

# 2. Use of funds

A use of funds statement has been provided separately and is also attached at the end of this section.

The 'deal overview' tab in the data room spreadsheet shows the list of prospective projects which are currently available to the company, subject to approval of this current funding application. It shows a total number of 1,750 new homes being built over the first 5 years of the project.

As the company intends to rent and retain the homes built, the company will be able to gear the value of its existing stock to build a further 2,000 homes which are shown in the spreadsheet but which are not funded directly from the original SDG loan. The detailed cash flow therefore shows a rolling credit facility in 2028 of £390m – that can be secured against the existing stock of completed homes held and is not related to the original SDG loan the subject of this application. The company is however open to making a further SDG DAF loan application after achieving its initial objectives.

The company has been tracking the UK land market for over 4 years now and has kept a record of the number of building plots available for sale over that period which would have been suitable for the company. There is no shortage of small building plots for sale in the 6 regions of the UK which the company is choosing to target. Those plots are not of interest to the national housebuilders as they consider them too small and the small plot size means they also attract fewer objections from local residents to new proposed developments so are ideal for the streamlined Home@ix model.

Research from Savills on Q2 2024 land sales for development reported there is competition from major housebuilders for sites supporting more than 50 homes. That is not the market Home@ix is aiming for. As reported elsewhere in this business plan, Housing Associations are facing financial stresses and this is confirmed by the latest Savills report, "Housing Associations remain largely out of the land market, ...59% of Housing Associations are no longer intending to acquire Section 106 or are reducing their requirements, driven largely by the lack of financial capacity and a focus on existing stock, according to our latest research on Section 106 delivery. The declining market for Section 106 has the potential to disrupt the ability of developers to progress on sites but also to acquire land.' Again this benefits Home@ix as competition is taken out of the land market the company is targeting and it can also join with larger housebuilders to fulfil their S106 obligations which the Housing Associations are unable to do.

The company has the option of collaborating with Housing Associations to build out on plots they have already purchased and there are currently ongoing discussions with a non-profit social housing company about a joint venture with them to build new homes where they have already secured land and planning consent. With its own in-house building company and a ready-to-go supply chain, the company is able to pivot to new opportunities, however they arise.

## 3. Financial model stress test

One of the biggest stress tests for a financial model is changes in interest rates on borrowing. As the current DAF loan is interest free, that test does not need to be carried out for the project.

An important risk for this project involves the £/$ exchange rate with the loan being made in dollars and a conversion required to pound sterling for a UK based company. An exchange rate of .79 has been used in the financial model. Other exchange rates can be easily substituted to see the affect of a change in the rate.

Land costs are an obvious variable for the project. Currently land values are at a 10 year low due to a reduction in home sales for the big housebuilders (see the reduction in per outlet sales referred to in the Roger Lewis research section).
Build cost inflation is a further issue to be considered for the project. UK build cost inflation has significantly reduced in 2024. According to the BCIS (Building Cost Information Service) annual housebuilding cost inflation, 'continued to cool in 1Q2024, standing at 0.7%, down from a peak of 15.3% in 2Q2022. On a quarterly basis, this represented a 0.3% increase compared with 4Q2023.' The project is also somewhat distanced from global geo-political inflation risks by sourcing most of its construction materials from the UK and dealing with suppliers who manufacture in the UK.
Operating costs are increased from Year 1 to Year 2 by 16% across the board, 7.69% in Year 3, 7.14% in Year 4, 6.6% in Year 5, to 5% in Year 10.

The model assumes rental costs of 10% of rental income each year to cover repairs. Repair costs should be low in the first few years due to the properties being new build homes. Any unused repair costs will be carried forward to a sinking fund for future repairs.

The model assumes there will be void periods in rent collection. As the company is letting affordable homes, it expects any void periods to be minimal with tenants staying long terms and any change over of tenants to take place quickly.

The company intends to leverage its carbon credits for sale on the open market or to secure green bonds for further funding. The company has chosen not to include that source of income/funding in the financial model for the sake of prudence.

## 4. Source of assumptions

Assumptions for the model in general are included in the commentary tab of the spreadsheet.

Each deal listed in the deal overview tab has its own individual appraisal further in the spreadsheet tabs and the assumptions made on those individual appraisals include the following:

- Build costs in each individual appraisal are assumed to be £200 psf with a 5% contingency. The company believes those costs are at the upper end of what is likely and anticipates that build costs can be reduced further by some 15-20%.

- The land value has been calculated using the RICS (Royal Institution of Chartered Surveyors) Professional Standard for residual valuation of development property, otherwise known as the 'Red Book'. The Red Book recommends using two valuation methods, market comparison and the residual method. Roger Lewis has been an RISC qualified land valuer for 40 years and has used a Bayesian analysis to inform the plot prices in the appraisals. In each appraisal that analysis has been further refined based on the individual land owners objective, from long term rental income to short term capital receipt resulting in a bespoke land valuation for each project. For example, Lostwithiel and Plympton will be joint venture arrangements with a rent split with the land owners. Bishops Street and Wilde Street are more focused on a capital payment up front for the landowners and for Cawdor Gardens the land owner is looking for payment for land in the form of completed homes. The Bayesian analysis is useful in considering plots distributed nationwide over a 10 year period in the future to arrive at an average figure of around £35,000 per plot. Each valuation is then tailored to accommodate the land owners personal requirements. As the company is looking at plots nationwide, it will not need to overpay for plots where land owners have unrealistic expectations. With very low cost capital, Home@ix can take account of the fact land owners have alternative options for 100% open market sales rather than 100% affordable homes.

- Sales costs are included in each appraisal at 2% of GDV, actual letting fees will be less than that. External letting fees are 10% of the first year's rent which is considerably less than 2% of the market value of the property

- Professional fees (architects, planners, construction oversight etc) are included in each appraisal at 7.5% of GDV. The actual fees are expected to be lower due to the company's digital design, planning and construction handbooks

- Rents have been averaged to £750 per month based on a national average rental of £1,000 for a 3 bedroom home, discounted by 25% to reach an affordable monthly rent of £750. Every house will be different but again based on a Bayesian analysis, it's a workable average for these purposes. Rents are assumed to increase by 5% a year so after 10 years the monthly discounted rent will have increased to £1,163.50.

The Funding Partnership

HOME@IX

# STRATEGIC ANALYSIS

## 1. Competition

The current UK housing crisis with over 1 million people on the waiting list for affordable housing means that even if there is far more competition than expected, there will still be much unfilled demand.

The company is focusing on small parcels of land in 6 different regions of the country to build small communities of homes. These are likely to be uncontroversial with both neighbours and planning authorities. The new Government focus on building more new homes and in particular affordable homes means the climate for the project could not be more welcoming.

Home@ix has a flexible business model so if it felt there was too much competition for land, the company can take on affordable housing obligations from bigger housing developers where land and planning permissions will already have been secured.

## 2. SWOT

**Strengths**
Financial strength of significant funding from SDG DAF providing stability and certainty
Experience and commitment of executive team over the whole range of housebuilding process from community engagement, design, planning, industrialisation of the construction process, integrative and new technology, sales marketing and finance – a rare combination in UK housebuilding

**Weaknesses**
Integrating different apps for seamless operation can be complex and time-consuming, requiring significant technical expertise and coordination
Encouraging behavioural change towards industrialisation and sustainable housing practices could be slow due to entrenched traditional building practices and resistance to change

**Opportunities**
New Government focus on expansion of affordable house building means right place, right time
Recent Government announcement to change planning laws to make house building easier will ease the planning path to new permissions
Competition not seeing opportunities already identified by Home@ix

**Threats**
Economic uncertainty in the UK and unforeseen global emergencies could alter the economic climate although housing is a necessity and affordable housing is unlikely to be materially adversely affected
Labour shortages in the construction market could slow down construction although this risk is mitigated for Home@ix through its shorter supply chain, buying mainly direct from companies who manufacture in the UK

Price increases in construction materials – this is an ongoing risk for the construction industry which to some extent is already expected and factored in the company's financial projections.

## 3. Porters 5 forces

**Competitive Rivalry**
As explained in the competition risk above, there is so much demand for affordable homes, demand cannot be met by the current entrants in the market.
It is unlikely that many new competitors will enter the affordable market because profit can be made more easily from selling new homes at full market value rather than letting new homes at affordable rents.

As explained in the 'What' of the business plan, the usual suppliers of affordable homes (Housing Associations) have been forced to leave the market due to lack of capital. Whilst there is some Government financial support for Housing Associations through Homes England, that support is minimal in the face of the size of the problem and as seen by announcements in the past few weeks since the new Government has taken office, it is unlikely to have the funds available to significantly change that.

**Supplier Power**
With over 1 million households on the waiting lists nationally for affordable homes, demand will vastly outstrip supply as it has for the last 30 years. It is highly unlikely there will be any change in that situation.

**Buyer Power**
Rents have risen in all parts of the UK in recent years. Attempts by the Scottish Government in 2022 to introduce rent controls appear to have had the opposite effect so it seems unlikely the UK Government will look to introduce rent controls. Left to the market and bearing in mind the excess of demand over supply, buyer power is not likely to adversely affect the company.

**Threat of Substitution**
The most attractive alternatives for homemakers will be a) buying a home b) finding another home at a lower rent c) finding a better home at the same rent d) not moving home.

The constraints on first time buyers (mortgage availability and interest rates) are not likely to change in the near or medium term.

Although finding another home at a lower rent is possible, once that supply has been exhausted, other homemakers will be available to take up the Home@ix homes.
With the high standards of design, construction and the myriad of additional benefits on offer to our homemakers, it seems unlikely that they would find a better home at the same rent.

It is possible that economic uncertainty, increased unemployment rates or job insecurity could mean that some people who might have become homemakers, will choose not to move to a new rental home. With so many people on the housing waiting list, that is unlikely to have much of an effect on the Home@ix demand.

**Threat of New Entry**
As explained in 1 above, there is so much demand for affordable homes, even if many more companies entered the market, demand could not be met.

## 4. PESTLE

**Political:**
*Government, trade and tax policies, general political issues, changes in leadership, regulation and political trends*

A new UK Government came into power in July 2024 and should (barring the unexpected) remain for the next 5 years.

Building new houses has been announced as one of the new Governments main objectives so the political climate is right for the project.

The Government has announced new planning regulations but those should only ease the regulatory burden on the company. The company's design plans already far exceed the current regulatory standards in many ways so any new standards introduced are likely to be catered for and if they are not, the company welcomes increasing housing standards.

**Economic:**
*Inflation, interest rates, exchange rates, economic growth, unemployment levels*
All of these factors impact the company.

Inflation in the UK has dropped significantly , it is currently 2.8% (June 2024 figures). Inflation forecast for the UK by the OBR for 2025 is around the 2% mark.

Interest rates in the UK have been at a 16 year high for some time. The first cut in interest rates was announced by the Bank of England in August 2024 from 5.25% to 5%. This is the first cut since March 2020. The Governor of the Bank of England said on 2 August 2024 following the cut he has 'no view on the path of rates and that the Bank would decide from meeting to meeting.' Average forecasts show rates at 4.5% by the end of 2024 and possibly 4% by the end of 2025.

Exchange rates can affect the company with the SDG DAF being made in $ and being converted to £. Some of the companies most advanced building components eg the Varmt från Solen combined heating system will be imported from [Sweden] and therefore subject to movement in currency rates.

Economic growth can affect the company. If the economy grows, there will be increased demand for new homes but there is a risk of inflation which can affect costs. If the economy slows, there is less risk of inflation but more risk that people don't want to take on the risk of moving to a new home. Overall demand for new homes is unlikely to be materially affected by any slow down in the economy as a slow down may increase demand for affordable rental homes.

Unemployment levels can affect the company through the availability of labour in the construction market.

**Sociological:**
*Lifestyle trends, education level, age distribution, general attitude, consumer behaviour, health consciousness, family and population size*

There are emerging trends in the UK property market. This analysis and this analysis (and others) identify trends such as a) homemakers wanting sustainable homes with renewable energy sources, b) co-living spaces and shared experiences c) smart home technology d) homes adapting to changing needs e) new innovations in marketing such as VR and AR. Home@ix is already serving all those trends with a focus on sustainable construction, community spaces and weaving technology through the whole homemaker experience.

**Technological:**
*E-commerce, cybersecurity threats, emerging technologies, big data and computing, AI and machine learning, supply chain automation*

Home@ix is an e-commerce company, bringing e-commerce to an industry (the housing market) which has been slow to adopt technology. AI and machine learning are already an integral part of the technologies involved in the Home@ix dashboard and supply chain automation is already embedded in the Unisot and Madaster collaborations.

Cyber security threats are an obvious risk for a tech based business. The company plans to protect its IP by use of dongles sent out to customers to reduce the risk of hacking and theft.

**Legal:**
*Labour laws, consumer laws, market regulation, health and safety laws, import/export regulations, anti-competitive practices*

The company welcomes any regulatory changes to protect the construction workforce, give additional employment to workers or regulate the market.

The company has an open source mindset which is the opposite of anti-competitive. Anti-competitive practices in the housing industry exist but do not materially affect the ability of the company to achieve its goals.

**Environmental:**
*Sustainability, climate change, waste management,environmental regulations, consumer environmental awareness*

These issues are at the heart of the company's business.
The company's commitment and deep involvement in these issues can be seen in other parts of the business plan.

HOME@IX

# KEY PARTNERS

Roger Lewis has put together a team of experienced people and consultants with targeted expertise. Home@ix has forged key partnerships to drive innovation and build a multi-layered network of experts with a diverse pool of knowledge, skills, and resources. These collaborations have been pivotal in shaping the project's plans.

Construction is in-house via Verrym@ix, a wholly owned subsidiary of Home@ix.

Technology will be ring-fenced through JV arrangements with the technology outside consultants. One alternative being considered is taking an equity share and board seat on MiHub, the most important IT supplier.

In a practice used in previous large scale ventures, outside consultants will be used as independent contractors for those services not needed in-house on a full time basis eg construction oversight and planning consultancy.

## Construction Team

Verrym@ix Ltd (wholly owned by Home@ix)
CEO: John Gibson (previously CEO of William Verry Ltd)
Executive Consultant: Thomas Solle (one of Europe's leading experts on closed panel housing)

## Technology Team

MiHub – independent contractor who has worked with Roger on developing new plugins to its existing BIM, slim BIM & community and stakeholder apps to create the unique Home@ix dashboard. This technology which will be a fundamental part of the Home@ix model will be ring-fenced through a JV agreement or minority stake in MiHub to protect the Home@ix IP. SaaS (Software as a Service) is not a model Home@ix will pursue.
Dietrichs – (as collaboration/outside consultant) Europe's leading experts in CAD/CAM technologies with customised modules, processing assistants and input aids for timber construction
Unisot – independent contractors based in Norway: use an advanced Asset Traceability platform & Blockchain technology to track and trace every step of a supply chain, from sourcing raw materials to delivering finished products. Allows visibility, accountability and trust through a supply chain ecosystem to verify sustainability claims and carbon accounting
Madaster – independent contractors create material passports providing a transparent and standardised documentation of the materials used, facilitating future reuse, recycling, and responsible end-of-life management.
Contrast Design experts in virtual sales presentations (including cinematic video tours), lead generation & fully automated sales engine (Contrast Design are partly in-house through being a Home@ix shareholder)

## Design & planning Team

Lichfields (planning) – independent contractors who have a 25+ year relationship with Roger Lewis. Role: to provide Government policy & strategic oriented planning advice

Pod Architects – independent contractors introduced by the COO to finalise the standard design for each region
Savills – independent contractors who have an existing relationship with Pod & COO to provide developer planning advice

## Construction supply chain (independent contractors)

These partnerships are instrumental in ensuring transparent, consistent and comparable ways of measuring and reporting ESG performance.
Hemp Span - has developed a world leading hemp-based particle board with virtually unlimited uses and is currently pursuing Global Rights for it.
LoCal Homes – off site manufactured housing
United Welsh
British Offsite – light guage steel frames
Frame Homes – timber frames
Frametech – timber frames
Marles – prefab construction
will be pivotal in ensuring a steady and reliable supply of materials and resources for sustainable and efficient supply chain
Totally Modular – customisable options
Danwood – fittings options

## Marketing Team

Contrast Design (see also marketing team above)
DRTV – direct regional advertising with Irving Martin, one of the country's leading direct marketing consultants (Irving will be partly in-house through being a Home@ix shareholder)

## Verification Team (all independent contractors)

Enable Earth - **UN accredited UN SDG advisors, consultants**
Akou - public consultation in planning, evaluating & reporting on SDG & ESG targets/contributions
Unisot – see technology team above
Madaster – see technology team above

## Bookkeeping & building management

Orbit Property Management – have worked with Roger for over 25 years

HOME@IX

# Key agreements

## Executive team

The company will sign service contracts with the individual executive team members as soon as funding is approved.

## Key technology partners

As soon as funding is approved the company will sign agreements with the following:

- JV agreement with MiHub for the Home@ix dashboard
- A SaaS agreement will be finalised with Unisot
- Carbon trading platform development with smartxdata

## Key marketing partners

Contract terms have been agreed and are ready for signature with the marketing team of Contrast Designs and Irving Martin

## Professional team

POD architects and Lichfields planning consultants will be appointed as soon as funding is approved.

## Land owners

As soon as funding has been approved, the company can finalise agreements for the digital twin demonstrators in the various regions. Agreement has already been concluded with the owner of the land for the Grenofen cottage at Tavistock.

## Supply chain

Supply chain partners will be finalised as soon as funding is approved.

HOMEAIX

## Other

## Is there a project timeline?

The Company is ready to launch and once funding is approved sites can start to be acquired and much needed affordable Homes can start to be built.

The commentary on the spreadsheet confirm that the timeline is for 175 homes to be built in the first full financial year with land acquisitions lined up completed within the first 2 months. Completed homes increase over the following years 2-10 as the pipeline starts to flow with the commitment to 1,750 homes from the SDG funding.
